

* ATTENTION – The partitioning boards of the Stacking Shelves (Wide Type) MUST NOT be removed. Also, this type of shelving unit MUST NOT be stood on its side.

! WARNING (Failure to adhere to the following instructions could result in serious consequences)

- * DANGER – Prevent small children from climbing or playing with the furniture: The shelves may fall, potentially causing injury or damage. Use extra caution when steel frames are used without partitioning boards. Avoid placing such parts within the reach of children.
- * For safety, steel pipes and side supports must always be in place. Usage that does not follow this instruction may result in serious consequences.

! CAUTION NOTES for proper use

- * To prevent the shelves from toppling, avoid putting heavy items on the upper shelves while the lower shelves are lightly loaded. Place heavy items on the lower shelves.
- * Avoid concentrating weight intensively on one part of a shelf: The shelf could become damaged or deformed.
- * Note that a 5-row unit cannot be used as a room divider.
- * Damage or deformation may result if the wide type of shelving unit stood on its side or if partitioning boards are removed.
- * Do not keep anything valuable or fragile on a shelf.

Structure of the Stacking Shelves

Combination examples and maximum loads

5 row-basic unit x 1 + 5-row add-on unit x 4

Place the basic unit vertically and add on sideways.

Max. load: total 150 kg = 60 kg x 5 units ÷ 2

The formula for calculating the max. load when units are connected:
Total max. load = Max. load/per unit x number of units ÷ 2

3 row-basic unit x 1 + 3-row add-on unit x 1

Place the basic unit horizontally and add up upward.

Max. load: total 40 kg = 40 kg x 2 units ÷ 2

The formula for calculating the max. load when units are connected:
Total max. load = Max. load/per unit x number of units ÷ 2

Customizing examples

Using the shelves with some partitioning boards removed (Regular type only)

When the shelves are placed horizontally and more units are added on, partitioning boards in the even-number row from the bottom (the second row and above) can be removed if you like.

- * Make sure that either side of one compartment has a partitioning board kept in place as shown in the above diagram.
- * It is dangerous for children to climb on the furniture or play with it: Do not remove partitioning boards within the reach of children.
- * Can add up to five rows.
- * DO NOT remove any partitioning boards of the wide type of shelving units.

Connecting units with different width.

Placing a basic unit vertically and adding on sideways.
* The wide type of shelving unit must not stand on its side.

Connecting units with different numbers of rows

Placing a basic unit horizontally and adding up upwards.

- * Can add up to five rows.
- * The wide type of shelving unit must not stand on its side.

Using the shelves as a room divider

Units added up to 3 rows can be used without a wall fastener (enclosed) as a room divider.

- * DO NOT remove any partitioning boards in this format.
